Contents of Volume 36

Number 1, July 7, 1969

HISATERU MITSUDA AND YUZURU SUZUKI. Enzymatic Pyrophosphorylation of 2-Amino-4-Hydroxy-6-Hydroxymethyl-7,8-Dihydropteridine by Cell-Free Extracts of *Escherichia coli* B 1

THOMAS HOHN. The Assembly of Protein Particles of the RNA Bacteriophage fr in Absence of RNA 7

MITSUYOSHI MATSUO AND E. W. UNDERHILL. A UDP Glucose: Thiohydroximate Glucosyltransferase from *Tropaeolum Majus* L 18

EUGENE J. OLIVER AND ROBERT P. MORTLOCK. Competitive Inhibition of an L-Fucose Isomerase Activity by Dithiothreitol 24

P. J. DAVEY, R. YU, AND ANTHONY W. LINNANE. The Intracellular Site of Formation of the Mitochondrial Protein Synthetic System 30

JAMES E. MILLER AND GERALD LITWACK. Studies on Soluble and Mitochondrial Tyrosine Aminotransferase: Evidence for a Physical Change in the Cytosol Enzyme during Induction 35

MISAO IDE. Adenyl Cyclase of *Escherichia coli* 42

M. J. LEIBOWITZ AND R. L. SOFFER. A Soluble Enzyme from *Escherichia coli* which Catalyzes the Transfer of Leucine and Phenylalanine from tRNA to Acceptor Proteins 47

M. A. VENIS AND A. STOESSL. Auxin-Induced Conjugates of Benzoic Acid 54

C. L. VILLEMEZ AND A. F. CLARK. A Particle Bound Intermediate in the Biosynthesis of Plant Cell Wall Polysaccharides 57

C. R. ROE, K. S. YOU, AND N. O. KAPLAN. Agar Gel Electrophoretic Demonstration of Charge Alteration in Mutant Bacterial Proteins 64

J. C. HSIA, D. J. KOSMAN, AND L. H. PIETTE. Organophosphate Spin-Label Studies of Inhibited Esterases, α-Chymotrypsin and Cholinesterase 75

SHU-I TU AND JUI H. WANG. A Flavin-Chlorophyll *a* Complex Resembling the P700 of Photosynthesis 79

MICHEL JACQUET AND ADAM KEPES. The Step Sensitive to Catabolite Repression and Its Reversal by 3'–5' Cyclic AMP during Induced Synthesis of β-Galactosidase in E. Coli 84

H. HERKEN, K. LANGE, AND H. KOLBE. Brain Disorders Induced by Pharmacological Blockade of the Pentose Phosphate Pathway 93

JEAN-MICHEL LOUARN AND ARMAND MICHEL SICARD. Identical Transformability of Both Strands of Recipient DNA in *Diplococcus pneumoniae* 101

H. LEE FLESHOOD AND HENRY C. PITOT. O-Phosphorylethanolamine Ammonia Lyase, a New Pyridoxal Phosphate-Dependent Enzyme 110

FRED FELDMAN AND LARRY G. BUTLER. Detection and Characterization of the Phosphorylated Form of Microsomal Glucose-6-Phosphatase 119

MICHAEL EPSTEIN AND GIL NAVON. DSS as an Activator of Carboxypeptidase A 126

J. J. BIRKTOFT, B. W. MATTHEWS, AND D. M. BLOW. Atomic Co-ordinates for Tosyl-α-Chymotrypsin 131

F. J. BOURNE. IgA Immunoglobulin from Procine Serum 138

AKIRA INOUE AND DAISABURO FUJIMOTO. Enzymatic Deacetylation of Histone 146

H. NEUMANN, U. ZEHAVI, AND T. D. TANKSLEY. Acid Labile Sugar in Pepsinogen 151

ISAAC SCHENKEIN, MARY BOESMAN, EDWARD TOKARSKY, LOUIS FISHMAN AND MILTON LEVY. Proteases from Mouse Submaxillary Gland 156

ROBERT H. DEBELLIS, WILLIAM BENJAMIN, AND ALFRED GELLHORN. Studies on In vitro RNA Synthesis by Chromatin Fractions from Rat Liver and Novikoff Hepatoma 166

F. L. CRANE AND J. D. HALL. Binary Membranes: A Reinterpretation of Membrane and Myelin Structure 174

L. N. ORNSTON, M. K. ORNSTON, AND GEORGE CHOU. Isolation of Spontaneous Mutant Strains of *Pseudomonas Putida* 179

Number 2, July 23, 1969

G. V. MARINETTI, TUSHAR K. RAY, AND VITTORIO TOMASI. Glucagon and Epinephrine Stimulation of Adenyl Cyclase in Isolated Rat Liver Plasma Membranes 185

M. OHNISHI AND D. W. URRY. Temperature Dependence of Amide Proton Chemical Shifts: The Secondary Structures of Gramicidin S and Valinomycin 194

J. E. CLEAVER AND G. H. THOMAS. Single Strand Interruptions in DNA and the Effects of Caffeine in Chinese Hamster Cells Irradiated with Ultraviolet Light 203

DAVID J. T. PORTER AND HAROLD J. BRIGHT. Location of Hydrogen Transfer Steps in the Mechanism of Reduction of L-Amino Acid Oxidase 209

TATSUYUKI KAMIRYO AND MICHIO MATSUHASHI. Sequential Addition of Glycine from Clycyl-tRNA to the Lipin-Linked Precursors of Cell Wall Peptidoglycan in *Staphylococcus Aureus* 215

MARJATTA AMEIN AND J. M. LEATHERWOOD. Mechanism of Cellobiose Epimerase 223

E. G. BURTON AND W. SAKAMI. The Formation of Methionine from the Monoglutamate Form of Methyltetrahydrofolate by Higher Plants 228

R. HAYNES AND K. A. WALSH. Enzyme Envelopes on Colloidal Particles 235

S. J. Hersey and F. F. Jobsis. Redox Changes in the Respiratory Chain Related to Acid Secretion by the Intact Gastric Mucosa 243
Maryka Horsting and Hector F. DeLuca. *In Vitro* Production of 25-Hydroxycholecalciferol 251
Leonard Keay. Neutral Proteases of the Genus Bacillus 257
John E. Findley and J. M. Akagi. Evidence for Thiosulfate Formation during Sulfite Reduction by *Desulfovibrio Vulgaris* 266
Jerome F. Hruska, John H. Law, and Ferenc J. Kézdy. Differential Titration of Trypsin-Like Enzymes 272
W. Tanner. Light-Driven Active Uptake of 3-0-Methylglucose Via an Inducible Hexose Uptake System of Chlorella 278
Glenn V. Dalrymple, J. L. Sanders, A. J. Moss, Jr., Max L. Baker, and K. P. Wilkinson. Energy Dependent Nucleolytic Processes are Responsible for the Production of Many Post-Irradiation Breaks in L Cell DNA 284

Information for Contributors

Manuscripts in duplicate may be sent to any one of the editors whose names and addresses are listed on the inside front cover.

In order to assure rapid and accurate publication, it is essential that manuscripts be prepared according to the instructions given below. Manuscripts which do not conform to these specifications may have to be returned for retyping.

Preparation of Manuscripts

Article length should not exceed 5 typewritten pages, double-spaced on 8½ x 11″ high quality paper (the complete manuscript, including space occupied by figures and tables, should be not more than 8 pages long).

Summary: The article must be preceded by a brief summary, typed single-spaced, not to exceed 10 lines in length (approximately 100-150 words). This paragraph should adequately summarize the pertinent findings of the paper.

Typing. Since articles are reproduced directly from manuscripts, the latter must be typewritten on good quality white bond paper. A black silk or carbon typewriter ribbon should be used, and special care should be taken to insure a sharp, clean impression of letters throughout. Use of an electric typewriter is strongly recommended. Erasures should be avoided. Care must also be taken to avoid errors in spelling, word division, and punctuation.

Manuscripts should be double-spaced, on only one side of the sheet; **references, footnotes, and figure legends should be single-spaced.** Typing area of the page must be as close as possible to 6½″ wide by 9½″ long.

Use of Symbols and Abbreviations. Abbreviations except for those in the Commission on Biochemical Nomenclature Document #1 (*Arch. Biochem. Biophys.* **115,** 1-12 (1966)) must be defined, and ambiguous abbreviations such as TCA, or P to signify anything but phosphate, should be avoided. Authors are urged to use chemical formulas, such as CCl_3COOH, wherever possible. If improper abbreviations are used it may be necessary to return manuscripts for retyping, which will delay their publication.

Footnotes should be typed single-spaced, at the foot of the page on which they are mentioned in the text. References and figure legends should be typed single-spaced on separate pages.

Illustrations and Tables. Photographs are acceptable. Mathematical or chemical symbols that cannot be typed should be inked in carefully in black. Structural formulas should be drawn in black ink. Illustrations and tables should be submitted on separate sheets. **Do not attempt to insert the figures, figure legends, or tables into the text.** This will be done by the Publishers.

All drawings should be done in black ink on white paper or tracing cloth; they must be planned for reduction to a width of not more than 5″. Final size of the printed page is 5½ x 8⅜″; figures must be planned to fit these proportions.

Graph paper, if used, should be ruled in blue; grid lines that are to show in the final reproduction should be inked in black. High quality glossy prints are acceptable.

Page Numbers and Headings. Page numbers should be written lightly in blue (not typed) at the bottom of each page.

The title of the paper should be typed in capital letters near the top of the first page, with the name(s) and affiliation(s) of the author(s) typed just below. Headings within the article should be arranged according to their relative importance.

References to the literature may be cited by number and listed in numerical order in a single-spaced list placed at the end of the manuscript. Abbreviations of journal titles should be those used in *Chemical Abstracts.*

Mailing. To avoid creasing, please place manuscripts between cardboards when mailing.

Reprints

Reprint order forms are sent to the authors immediately upon acceptance of their manuscripts. The price list is included.
